Art Unit: 1773

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-14, drawn to an adhesive composition, classified in class 525, subclass 50+.
  - II. Claims 15-65, drawn to a composite laminate, classified in class 428, subclass 515+.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the adhesive in the laminate does not require 70-90% rubber and 10-30% crystalline polymer. The subcombination has separate utility such as a self-supporting elastomeric film.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
4. This application contains claims directed to the following patentably distinct species of the claimed invention:
5. First elastomeric substrate –
  - i. necked-bonded laminate
  - ii. stretch-bonded laminate

Art Unit: 1773

- iii. polypropylene spun bonded layer
  - iv. polyethylene with a polypropylene spun bonded layer
  - v. styrene copolymer strand
  - vi. polyurethane strand
6. Second substrate –
- i. necked-bonded laminate
  - ii. stretch-bonded laminate
  - iii. spun bond-meltblown-spunbond laminate
  - iv. polypropylene spun bonded layer
  - v. polyethylene with a polypropylene spun bonded layer
  - vi. styrene copolymer strand
  - vii. polyurethane strand
  - viii. nonwoven
  - ix. woven

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for each substrate for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, a first elastomeric substrate and a second substrate is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Art Unit: 1773

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
